TERRAGO
LOCATION DEFINED, INTELLIGENCE DELIVERED

# ACCESS, UPDATE AND SHARE ENTERPRISE GEOSPATIAL ASSETS WITH ANYONE, ANYWHERE

TerraGo Toolbar® is a free plug-in for Adobe® Reader® that enables over 800 million Adobe Reader users to access, update and share GeoPDF® maps and imagery, in both connected and offline environments. TerraGo Toolbar provides field personnel with anytime, anywhere access to rich, geospatial information and location intelligence applications that enable them to collect on-the-ground intelligence and send it back to analysts and decision makers.

IMPROVE SITUATIONAL AWARENESS

TerraGo Toolbar is easy-to-use and allows the sharing of GeoPDFs and workflows that can operate online, offline or wherever the mission requires. With TerraGo Toolbar, users do not need specialized training or equipment to access, update, share and return current location-based information back to the enterprise.

MAXIMIZE THE VALUE OF GIS INFRASTRUCTURE

TerraGo Toolbar allows organizations to significantly extend their geospatial assets to mobile workforce – even those in challenging geographic environments that lack IT infrastructure. The bi-directional flow of information from the core of the enterprise to the edge and back increases the use of geospatial data, systems and investments, maximizing the value of these assets by improving data quality, response times, decision making and productivity.
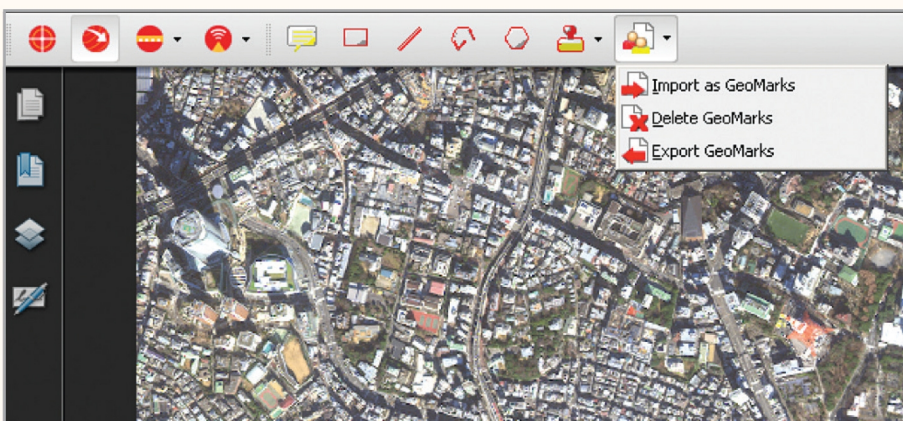

FEATURES

GeoPDF maps & imagery are accessible in Adobe Reader and available to users in both connected & offline environments

Intuitive interface allows users lacking sophisticated GIS or training to access, dynamically update & share geospatial information

Add structured & unstructured data, as well as audio, video, photos, notes & multimedia

TerraGo Toolbar allows users to access, update and share portable GeoPDF maps and imagery with Adobe Reader.

ENHANCE GEOSPATIAL COLLABORATION

TerraGo Toolbar builds upon the TerraGo GeoPDF technology to bring a powerful, geospatial capability to Adobe Reader and Adobe Acrobat®. TerraGo Toolbar uses GeoPDF technology to deliver interactive, portable and intelligent geospatial applications that incorporate maps, imagery, business logic and workflow with users in any location.

CAPTURE FIELD DATA FOR COLLABORATION

With TerraGo Toolbar, GeoPDFs become collaborative geospatial applications that allow users to measure distance and area or add GeoMarks to capture field information with stamps, geoforms, notes, photos, videos and other multimedia. The collected information can be shared with peers or returned back to the system of record, enabling timely and relevant intelligence sharing. As a result, organizations benefit from improved geospatial data quality and more efficient collaboration between decision makers, analysts and field personnel.

LEVERAGE A RICH & ROBUST FEATURE SET

TerraGo Toolbar leverages external applications and services such as GPS and integrates with external services, like those provided by Google Maps. GeoJavaScript provides programmatic access to geospatial content within GeoPDF maps to enable the development of applications that can communicate with Web and other services.

ADD ADVANCED FEATURES & FUNCTIONALITY

TerraGo Toolbar complements TerraGo Publisher® and TerraGo Composer®, extending their reach to anywhere in the enterprise and beyond. GeoPDF maps and imagery means that workers operating remotely gain access to powerful geospatial applications, with advanced features such as precision layer control and hyperlinking, which increases the value of traditional GIS systems and provides enhanced situational awareness.

BENEFITS

Extend geospatial capabilities to the edge so field users can easily access & interact with advanced geospatial maps & imagery

Improve field data collection through the ability to collect, embed & distribute field-based intelligence

Boost situational awareness by providing field personnel with real-time access to geospatial information

ABOUT TERRAGO

TerraGo makes software tools and mobile apps that make it easy to share place-based data anywhere, any time. From sharing feature-rich maps and imagery to deploying on-demand apps for a mobile workforce, TerraGo builds intuitive products that enhance collaboration from anywhere on the planet.

Founded in 2005, TerraGo invented the industry's most widely adopted geospatial collaboration technology with its innovative GeoPDF® products and revolutionized field data collection with its TerraGo Edge mobile platform. TerraGo's customers include the world's leading defense and intelligence departments, government agencies, non-profits and commercial enterprises in every industry, with over 1,500 global customers based in over 70 countries and all 50 US states.
